

## Appendix S2. Mean individual seed mass across sites

Thomas F. Carlin, Matthew B. Scott, Thomas SH. Paul

**Figure S2. Mean individual filled seed mass (MISM; mg) from serotinous (green) and non-serotinous (grey) cones across sites. There were no significant differences between groups. Numbers below boxplots indicate the number of cones per site that were serotinous or non-serotinous. A total of 522 cones had their MISM calculated.**
