

## Supplementary Material

**Table S1.** Location data and labelling for the samples included in this study. Samples with an \* by the coordinates are approximate based on collection location (units are the New Zealand TM map grid).

| ID | Species            | Island | EastTM    | NorthTM     |
|----|--------------------|--------|-----------|-------------|
| 1  | <i>C. selloana</i> | SI     | 1540556.5 | 5147039.8   |

**Figure S2.** STRUCTURE plot of the whole dataset including *Cortaderia selloana* (two divisions – red and blue) and *C. jubata* (one division – green). The value of  $K$  was chosen using STRUCTURE Harvester (Earl & von Holdt 2012).

**Figure S3.** STRUCTURE plot for *C. jubata* only, showing  $K = 3$  as chosen by STRUCTURE Harvester (Earl & von Holdt 2012). Order of samples is as in Table S1 for *C. jubata*, with the first 12 samples being from the South Island, and all remaining samples from the North Island.

**Figure S4.** STRUCTURE plot for *C. selloana* only, showing  $K = 2$  as chosen by STRUCTURE Harvester (Earl & von Holdt 2012). Order of samples is as in Table S1 for *C. selloana*. The first 48 samples are from the South Island and the remaining 438 are from the North Island.
