

Appendix S4. Mean individual seed mass across sites

Thomas F. Carlin, Matthew B. Scott, Thomas SH. Paul

Figure S4. Cone circumference (cm) of serotinous (green) and non-serotinous (grey) cones across sites. Numbers below boxplots indicate the number of cones per site that were serotinous or non-serotinous. A total of 250 cones had their orthogonal measurements taken, from which circumference was calculated.
