

Appendix S3. Cone length across sites

Thomas F. Carlin, Matthew B. Scott, Thomas SH. Paul

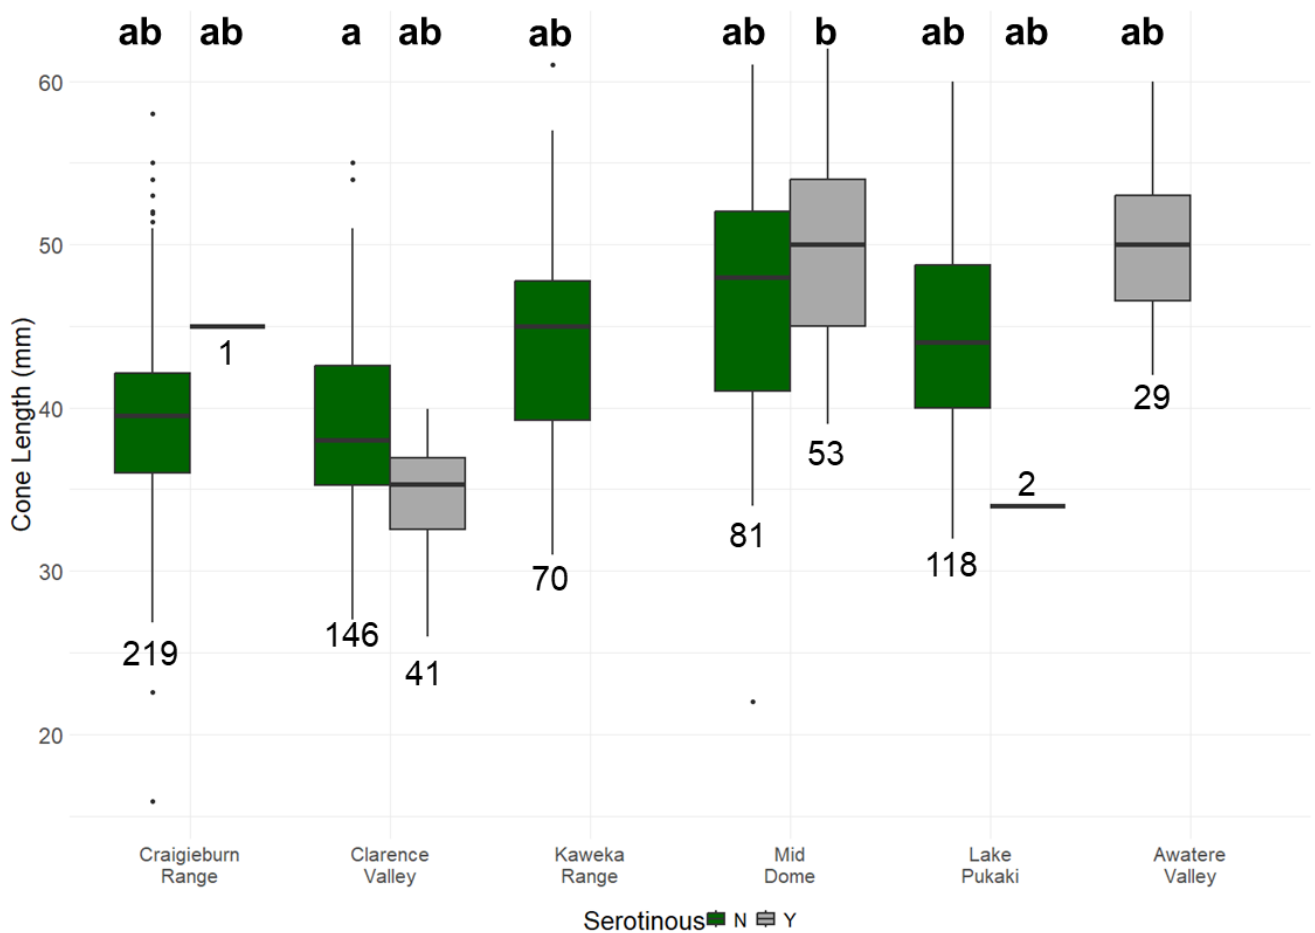

Figure S3. Cone length (mm) across sites of serotinous (green) and non-serotinous (grey) cones. Letters that are shared above boxes indicate no significant difference between the groups (accounting for tree ID and population variance). Numbers below boxplots indicate the number of cones per site that were serotinous or non-serotinous. A total of 760 cones were measured.
